Summary

Senior Java Backend Engineer with 12+ years of experience designing, building, and operating large-scale distributed systems and real-time data platforms in production. Deep expertise in backend system design, event-driven architectures, high-throughput data processing, and cloud-native microservices. Proven track record of owning and scaling backend platforms processing 100K+ RPM, leading engineering teams, and driving measurable improvements in system latency, reliability, and deployment efficiency across enterprise environments. and cloud-native microservices using Spring Boot and Quarkus running on Kubernetes and AWS. Proven ability to drive end-to-end technical initiatives, design fault-tolerant and scalable systems, and represent teams in architecture and design discussions. Passionate about streaming systems, observability, and building reliable infrastructure at scale.

Core Skills

- Java
- Distributed Systems
- Microservices Architecture
- Backend System Design
- Performance & Reliability Engineering
- Cloud (AWS)
- Kubernetes | Docker
- Apache Kafka | Apache Flink
- Event-Driven Architectures
- Real-time Data Processing
- Observability
- Security-Focused Backend Systems
- Spring Boot | Quarkus
- Go | Python

Professional Experience

Senior Software Engineer, 05/2021 – Present
AOT Technologies – Calgary, Canada

- Led backend architecture and contributed to production operations of a distributed API telemetry and workflow automation platform serving enterprise clients.
- Contributed to design and development of a Kafka-based real-time ingestion platform handling 100K+ RPM of high-volume API telemetry.
- Developed high-performance Java microservices using Quarkus to support scalable event-driven backend workloads.
- Led end-to-end delivery of enterprise workflow orchestration using Temporal, eliminating manual recovery steps and improving pipeline reliability across complex multi-system processes.
- Owned production observability stack (Prometheus, Grafana, Datadog), reducing mean time to detection for incidents and supporting 24/7 platform operations across Kubernetes and AWS environments.
- Implemented zero-downtime Kubernetes deployment pipelines, reducing release cycle time by 40% and improving deployment reliability for high-availability backend services.
- Coached and mentored engineers on backend systems design, API gateway integration, and production reliability practices.

Senior Member of Technical Staff, 01/2019 – 04/2021
Oracle – India / Remote

- Engineered Java backend services for a large-scale cloud monitoring platform managing 20K+ virtual machines, maintaining high availability across production cloud environments.
- Designed scalable telemetry ingestion workflows, improving fault detection speed and reducing mean time to resolution for production incidents.

- Delivered an OAuth2/JWT security framework across backend services, eliminating legacy authentication vulnerabilities and securing service-to-service communication.
- Supported production incident response and drove root-cause analysis for critical monitoring failures, contributing to improved platform reliability at cloud scale.

Software Developer, 02/2017 – 01/2019
Dell Technologies – Bangalore, India

- Built Java/Spring Boot backend services for Dell's enterprise IoT analytics platform, supporting real-time telemetry processing across thousands of connected devices in production.
- Designed a high-throughput data export framework processing 1M+ records, significantly reducing report generation time for storage analytics.
- Executed containerization of legacy Java/Spring Boot applications using Docker, enabling consistent hybrid cloud deployments and reducing environment provisioning time.

Software Developer, 04/2014 – 02/2017
Hexagon Global IT – Chennai, India

- Developed Java/Spring backend systems for a financial investment management platform including real-time NAV computation and trade tracking.
- Implemented event-driven real-time alert processing using CometD messaging, improving alert delivery responsiveness for live portfolio management workflows.

Education

Anna University
Bachelor of Engineering — Computer Science

Certifications & Training

- AWS Certified Solutions Architect — Associate
- Confluent Certified Streaming Engineer (Kafka, Flink)
- AWS Certified AI Practitioner
- MongoDB Associate Developer (Java)
